Billerica, Massachusetts, April 26, 2011 – American Ink Jet Corporation (AIJC), one of the world's leading independent developer and manufacturer of ink jet inks, announces the availability of their "Eco-Jet" Mild Solvent inks in 440ml cartridges for use in several models of Roland wide format ink jet printers.

The Eco-Jet inks are a 6 color ink set and can now be purchased in "plug & play," prefilled, 440ml cartridges for use in Roland VersaCAMM, Pro II V, Pro II EX, Soljet, Soljet Pro III and Pro II series printers. A complete list of printer models can be found on the Wide Format Product Page at www.americaninkjet.com.

AIJ's Eco-Jet cartridges are very closely color matched to the OEM inks so they do not require new color profiles. Cartridges can be installed individually as OEM ink cartridges run empty and users switching from OEM inks do not need to flush out their ink lines. Eco-Jet inks are very low odor, provide excellent abrasion resistance and flexibility with very fast dry times.

Like all AIJ inks, Eco-Jet Mild Solvent inks are formulated with only the highest quality components and are manufactured to AIJ's very tight specifications assuring optimal performance, trouble free printing and precise batch to batch consistency.

Founded in 1983, American Ink Jet Corporation is one of the leading quality developers and manufacturers of ink jet inks. The company maintains a multidisciplinary research and development staff that applies C3 Calibrated Color Chemistry™ technology to formulate inks with chromatic color, precision and purity. Utilizing dyes or pigments, AIJ manufacturers both standard and archival inks and works with printer manufacturers, print head developers (continuous, piezo & thermal) and media coaters to develop optimum solutions using water based ink jet inks. The commitment to purification and ultra-filtration with inkjet inks has earned the company a reputation for providing the most reliable, consistent inks.
